Directory of Wetland Plant Vendors

ISSUE:

Wetland mitigation, restoration, and creation projects are often hindered by a limited knowledge of wetland plant vendor locations and the materials they supply. Government, commercial, and private interests often need large quantities of selected plant species from ecological regions similar to locations of potential wetland projects. Local vendors may not necessarily supply the species of interest, or the species may not be available in the volumes required. Therefore, a current national listing of vendors is critical to support these wetland activities.

DATA COLLECTION:

The Directory of Wetland Plant Vendors provides a national listing of vendors indexed by scientific name of wetland plant species. It was developed by personnel at the U.S. Department of Agriculture, Natural Resources Conservation Service (NRCS), Jamie L. Whitten Plant Materials Center, Coffeeville, MS. It is an updated version of U.S. Army Engineers, Waterways Experiment Station. 1992. *Directory of Wetland Plant Vendors*. Wetlands Research Program Technical Report WRP-SM-1, Vicksburg, MS. A thorough search was made to identify commercial sources of wetland plants in the United States; however, it is impossible to include every potential vendor. No attempt was made to exclude wetland plant species which might have invasive properties. The inclusion of any vendor does not indicate endorsement by NRCS. The species availability information was correct based on information supplied by the vendor when entered, but NRCS does not guarantee current availability or quality of plant materials produced by any vendor.

SUMMARY:

The directory provides the following:

- A listing of wetland plant vendors and their contact information.
- A listing of obligate and facultative wetland plant species (as determined by the U.S. Fish and Wildlife Service) for which vendor sources were found.
- Vendors that supply each species.
- The propagule types (seed and/or vegetative propagule) that are available.
- A listing of alternate names (synonyms) for applicable species.

Introduction

This **Directory of Wetland Plant Vendors** is divided into three parts.

Part 1 lists the vendors of wetland plants by state. Each vendor is assigned a “Nursery Code”, and these codes are listed in numerical order.

Part 2 lists only wetland plants for which vendors were found, sorted by the most currently accepted species name. This list was drawn from the species list found in the Federal Register Notice 2680-2681, Volume 62, Number 12, Reed, Jr., Porter B. 1997. *Draft Revision of The National List of Plant Species That Occur in Wetlands: 1996 National Summary*, U.S. Fish and Wildlife Service, National Wetlands Inventory, St. Petersburg, FL, which is a proposed revision of the 1988 National Listing. Only those species in the obligate wetland (OBL) or facultative wetland (FACW, including + and -) indicator categories within some geographic region on the USFWS list were included in this directory. Wetland indicator species not listed are those for which no commercial sources were located when compiling information for this directory.

The plant nomenclature for this directory follows USDA, NRCS. 1999. *The Plants Database*. National Plant Data Center, Baton Rouge, LA, <<http://plants.usda.gov>> and was cross-checked with the PLANTS database as of May, 1998.

The list contains some naturally occurring hybrid species that are designated by a genus name followed by an “X” and the species name, e.g., *Typha X glauca* (blue cattail). Those species with a “var.” (botanical variety) or “ssp.” (subspecies) designation indicate that these forms are to be used in a wetland habitat because of their increased tolerance to wet sites. For example, *Viburnum dentatum* var. *dentatum* (Southern arrow-wood) is more adapted to conditions of high soil moisture than the species, *Viburnum dentatum*. Those interested in purchasing plants for wetland use should contact the vendor to confirm the availability of the specified subspecies or variety. The common names listed are those most widely accepted for that species, although other names may be used locally. The directory includes commercially available cultivars within the listing for the plant species, but does not identify them as such.

The species are referenced by “Nursery Code” to the vendors listed in Part 1. Codes listed for each species end in one of three letters, indicating the type of propagules available from that vendor (**p = plants or other vegetative propagules, s = seed, and b = both seed and vegetative propagules**). Ideally, plant materials to be purchased should originate from within the same geographical region in which they will be planted. Wide differences in latitude generally have more bearing on the suitability of plant materials than similar

Directory of Wetland Plant Vendors

differences in longitude; however, there are many additional factors, such as soil type, rainfall patterns, local topography, etc., involved in determining adaptability. Materials grown by local nurseries may not have originated from a local source, so it is highly recommended that the nursery be contacted to determine suitability of the material prior to purchase. Some of the materials listed may have been selected by horticulturists for some distinguishing feature, and would therefore not possess the genetic diversity of those obtained from a natural population. For wetland restoration and mitigation uses, it would be better to concentrate on obtaining materials from nurseries that specialize in producing wetland plants for these uses. Local NRCS field offices can assist in planning many wetland projects, and for complex plantings, consultation with a wetlands vegetation specialist is also recommended.

Part 3 lists the synonyms for the species found in Part 2. All synonyms are according to the PLANTS database. The synonyms/alternate names list will be useful for locating species which may be commonly referred to by an older name. For example, *Scirpus validus* is a former name for the currently accepted *Schoenoplectus tabernaemontani*.

To Use This Directory:

- Look up the species of interest. For example, plans for a wetland creation site call for *Lobelia cardinalis* (cardinal flower).
- If the species of interest cannot be located, check the alternate plant names list in Part 3. If the species name is not listed in Part 3, a source was not located for that plant.
- Note the Nursery Codes listed for that species that are geographically similar to the planting site and that offer the desired propagule type. For example, the site is located in Kentucky (KY) and requires plants as the propagule. Looking at the listing for cardinal flower, there are two KY vendor codes that offer plants, KY002b and KY003p.
- Go to Part 1 and find the information listed for the vendor(s). For example, KY002 is the code for Shooting Star Nursery, 444 Bates Rd., Frankfort, KY 40601, (502) 223-1679.
- Contact the vendor(s) for availability and pricing information.
